                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cc and an amino acid composition corresponding to the compolymer. The glatiramer acetate related tetrapolymers. The polypeptides may also be cc used for treating and preventing immune diseases in a mammal. Autoimmune cd diseases which may be treated include either cell-mediated or creating and preventing immune diseases in a mammal. Autoimmune cd diseases which may be treated include either cell-mediated or cantibody-mediated diseases. Such diseases include arthritic conditions, cc multiple complianting diseases and inflammatory conditions, autoimmune haemolytic canaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune cc uveoretinitis, Crohn's disease, chronic immune thyroidypaenia cc purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves cd disease, duillain-Barre's syndrome, Hashimoto's disease, idiopathic cmyxoedema, mysathenia gravis, psoriasis, pemphigus vulgaris, or systemic cc upus erythematosus. Mediated-mediated diseases which can be treated conclude host-versus-graft disease, graft-versus-host disease, and cc delayed-type hypersensitivity. The polypeptides of the invention have ce defined molecular weights and physical properties which are analogous to conclude with marvers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC invention describes polypeptides (I) for determining the molecular weight cand an amino acid composition corresponding to the copolymer. The copolymer (CP), which has an identified molecular weight cand an amino acid composition corresponding to the copolymer. The copolymer act invention are used as molecular weight markers for composition are used as molecular weight markers for composition are used as molecular weight markers for continuous continuous and preventing immune diseases in a mammal. Autoimmune composition in the polypeptides may also be composed in the copolymers of the polypeptides may also be composed in the copolymers of the polypeptides may also be composed in the copolymers of the conditions, and the conditions of the copolities of the conditions, colletted diseases. Such diseases include arthritic conditions, codemyelinating diseases and inflammatory conditions, e.g. multiple considered in the copolymer conditions, colletted arthritis, autoimmune therefore the conditions, colletted arthritis, autoimmune thrombocytopaenia composed in the copolymers, collitis, contact sensitivity disease, diabetes mellitus, craves contact sensitivity disease, diabetes mellitus, craves considered include host-versus-graft disease, pand iseases, which can be treated conclude host-versus-graft disease, graft-versus-host disease, and conclude molecular weights and physical properties which are analogous to conclude the conditions of the invention have an actate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune upophoritis, autoimmune thyroiditis, autoimmune thyroiditis, cothoins disease, chronic immune thromboytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Gillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoddema, myasthenia gravis, posriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Copolymer 1 related polypeptides used as glatiramer acetate and for treatment and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pemphigus vulgaris; systemic lupus erythematosus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides [1] for determining the molecular weight of a copolymer (CP), which has an identified molecular weight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (YEDA )

                                                                                                                                                                                                                                                                                                                                                                 AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present climvention describes polypeptides (I) for determining the molecular copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer. The copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer. The polypeptides may also be used for treating and preventing immune diseases in amammal. Autoimmune copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer. The copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer. Autoimmune copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer. The manufacture copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer. Copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer copolymer. Copolymer copolym

                                                                                                                                                                                              segments: YKK, EAE, KAK, AAK, and AAA. The N-terminal alanine real selft behind following CNBr cleavage of the fusion protein. The product prevents or arrests experimental autoimmune encephalomyelitis. They are used to prevent, arrest or control ademyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in
                                                                                                                                                                                                                                                                                       To improve the expression of rCOP-1 polypeptides in E. coli, genes coding for rCOP-1-77 were subcloned from pxRV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1984 US4691009, NRRL B-19810), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequences. Sequences, originating from the 5' linker sequence in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1-77 contains oligonucleotide duplexes incoding the following segments: YKK, PAE, KAK, PAK, and PAA. The N-terminal alamine residue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-FEB-1990;

                                                                                                                                                            To improve the expression of rCOP-1 polypeptides in E. coli, genes coding for rCOP-1-19 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1984 US4691009, NRRL B-15910), a plasmid used to express protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequences, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1-19 contains oligonucleotide duplexes incoding the following segments: YKX, ABZ, KAK, EKA, KCA, YEA, AKA KEA, and AAA. The N-terminal alanine residue is left behind following CNBr cleavage of the

                                                                              and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, Corbn's disease, chronic immune thromborytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antianaemic; immunosuppressive; demyelinating disease; osteoarthritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis; crohn's disease; chronic immune thrombocytopaenia purpura; collitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxcedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidiabetic; thyromimetic; haemostatic; antipsoriatic; dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY82573 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAY82571 to AAY82577 represent specifically claimed copolymer molecul weight TV-marker polypeptides from the present invention. The present invention describes polypeptides [1] for determining the molecular weight of a copolymer (CP), which has an identified molecular weight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24-SEP-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ş
The present invention relates to a transporter system for delivering CC nucleic acid to a cell. The system comprises a nucleic acid binding CC complex, consisting of a binding molecule bonded non-covalently to the CC binding molecule is spermine or a spermidine derivative. Nucleotide CC sequences AAA36633-A36652 and peptide sequences AAY98456-Y98500 are used in the construction of the transporter system of the invention. The CC transporter system is used in gene therapy, particularly to deliver nucleic acids to hepatocytes, muscle cells or bone forming cells, e.g. CC for treating cardiovascular disease, cancer, and infection. The CC transporter systems are also used to create transgenic animals (as models CC for human carcinogenesis or disease or for drug testing). Other uses CC include transforming cells to produce proteins, or transfecting cells in CC vitro to study the function of the nucleic acid. The use of a surface CC ingand allows specific targeting of selected cells and tissues. The lytic agent provides for release of the nucleic acid into the cellular CC interior, from endosomes, without requiring endosomal or lysosomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as molecular weight markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Transporter system; nucleic acid delivery; gene therapy; cancer; carcinogenesis; cardiovascular disease; infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               31-JUL-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY98499;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              System for transporting nucleic acid into cells, useful e.g. in gene therapy and for generating transgenic animals, comprises binding agent linked to nucleic acid, surface ligand and lytic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-MAR-1992;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
delivering nucleic acid into a cell. The NTS contains but is not limited to 5 components: (a) the nucleic acid or a macromolecule to be delivered; (b) a molety that recognizes and binds to a cell surface receptor or antigen or is capable of entering a cell through cytosis; (c) a nucleic acid or macromolecular molecule binding moiety; (d) a molety that is capable of moving or initiating movement through a nuclear membrane; and/ or (e) a lysis molety that enables the transport of the entire complex from the cell surface directly into the cytoplasm of the cell. The NTS delivers nucleic acid into the cellular interior as well as the nucleus of specific cells. The NTS can be used to treat disorders by targeting specific nucleic acid accordingly. The NTS can also be used to create transgenic animals for assessing human disease, such as cancer, in an
                                                                                                                                                                                                                                                                                                                                                  14-DEC-1993;

The sequence represents poly-Lys-Ala, used to bind nucleic acid in a nucleic acid transporter system. The nucleic acid transporter system uses nucleic acid binding complexes containing surface ligands which are capable of binding to a cell surface receptor and entering the cell through cytosis. The compounds of the invention are either ligands, binding molecules (surface ligands), lysis agents, spacer molecules or their intermediates. The ligands, binding molecules, lysis agents and spacer molecules are used in nucleic acid transporter systems to deliver nucleic acid into specific cells e.g. in gene therapy to deliver nucleic acid into hepatocytes, muscle cells or bone forming cells.

Nucleic acid transport system, useful for creating transgenic for assessing human disease such as cancer in an animal model

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5
                         This invention describes a novel system (I) for delivering a nucleic acid to a cell, comprising a binding complex comprising a ligand binding molecule noncovalently bound to a nucleic acid and covalently linked to a surface ligand, and a second binding complex comprising a second binding molecule noncovalently bound to a nucleic acid and covalently linked to a nuclear ligand. The complexes are simultaneously bound to the nucleic acid. The nucleic acid transporter system can also be used in a method for the in vivo targeting of the insertion of DNA into a cell. It can also be used in processes for producing transformed cell lines. The system can be used to deliver a variety or proteins and polypeptides, such as hormones, growth factors, enzymes, clotting factors, tumor suppressors, viral antigens, dargs, oncogenes, tumor antigens, tumor The transporter system uses lysis agents to overcome the problems of endosomal/lysosomal degradation seen with prior art systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                      The invention comprises a method for identifying a compound capable of modulating biofilm formation by bacteria. The method of the invention is useful for identifying a compound capable of modulating biofilm formation by bacteria or modulating bacterial antibiotic resistance. The method of the invention is also useful for diagnosing and treating a subject (especially an immunocompromised human) that is afflicted with a biofilm-associated disease or disorder, such as: cystic fibrosis; AIDS; middle ear infections; acne; periodontal disease; catheter-associated infections; and medical device-associated infections. The present amino acid sequence represents a protein that is used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Biofilm formation modulation; biofilm-associated disease; cystic fibrosis; AIDS; middle ear infection; acne; periodontal disease; catheter-associated infection; medical device-associated infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying compound capable of modulating biofilm bacteria/bacterial antibiotic resistance, useful for biofilm associated disease -
                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-FEB-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABJ18771 standard; Protein; 347
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 119-120; 154pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2003-075601/07.

                                                                                                                                                                                                                                                                                                       The invention provides heat-killed Mycobacterium vaccae, or recombinant CC M. vaccae proteins. The M. vaccae proteins may be employed to activate T cells and natural killer cells, to stimulate the production of CC cytckines, to enhance the expression of co-stimulatory molecules on CC and function. The proteins can be expressed by standard recombinant CC and function. The proteins can be expressed by standard recombinant CC methodology. Pharmaceutical compositions comprising the proteins or nucleic acid sequences encoding the proteins can be used for the CC treatment, prevention, and detection of disorders including infectious Cdleasses, immune disorders and cancer. In particular, the compounds and CC such as mycobacterial infections, asthma, allergies, tuberculosis, CC leprosy, sarcoidosis and lung cancers, and disorders of the skin such as gsoriasis, atopic dermatitis, eczema, allergic contact dermatitis, and skin cancers such as basal carcinoma, squamous cell
                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAR84568
                                                                                                      AAR84565-R84569 are polypeptides of the TCR27 protein of T.cruzi
The proteins are all fusion products with glutathione-5-transferase
(GST) and some contain a linker sequence. The TCR27 protein comprises
a 95 amino acid (aa) N-terminal region; 69 repeats of a highly
conserved 14 as sequence and a 68 as C-terminal region. This sequence
encodes the GST sequence, the Ag44 polypeptide contg. 16 of the 69
repeat units and also contains the amino and carboxy terminal
peptides of TCR27. The TCR27 polypeptides of the invention are useful
for the diagnosis of CCR37 sequence (American Trypanosomiasis), they
are capable of detecting anti-T.cruzi antibodies; or for blood
screening. The TCR27 protein has epitopes to which most T.cruzi
infected individuals have antibodies. The TCR27 polypeptides will not
react with serum from patients with leishmaniasis, schistosomiasis,
corisionmune disease and are hence less likely to cause false

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides a method for the diagnosis, prevention and CC treatment of ulcerative colitis (UC) using histone H1-like antigen, a govern antigen or a Bacteroides antigen as a target antigen. The novel method of diagnosing UC in a subject suspected of having inflammatory bowel disease (IBD) comprises: (1) obtaining a sample from the subject; (2) contacting the sample with a histone H1-like antigen, or perinuclear anti-neutrophil cytoplasmic antibody (pANCA)-reactive fragment, to form a complex of the histone H1-like antigen, or the pANCA-reactive fragment, and antibody to the histone H1-like antigen, or the pance of the complex of the complex where the presence of the complex complex where the presence of the complex complex is prevention and treatment of UC. The pance are useful in the complex porin antigen and Bacteroides antigen are useful in the complex diagnosis, prevention and treatment of UC. The methods can also be used for identifying agents useful for treating UC. The present sequence compressed to the complex useful for treatment of UC. CURRENT APPLICATION NUMBER: US/09/405,743A
CURRENT FILING DATE: 199-09-24
NUMBER OF SEQ ID NOS: 7
SOFTWARE: PatentIn Ver. 2.1
SEQ ID NO 7
LENGTH: 109
TYPE: PRT
ORGANISM: Artificial Sequence

OTHER INFORMATION: OTHER INFORMATION:

Description of Artificial Sequence: PEPTIDE

SYNTHETIC

FEATURE:

ALIGNMENTS

RESULT 1 US-09-405-743A-7

Sequence 7, Application US/09405743A
Patent No. 6514938
GENERAL INFORMATION:
APPLICANT: Yeda Research and Development Co., Ltd.
TITLE OF INVENTION: GLATIRAMER ACETATE MOLECULAR WEIGHT MARKERS
FILE REFERENCE: 60807-A
